## SUPER YACHT SECURITY

## ASSESS

Testing from an internal and external network perspective to highlight weaknesses in both IT and OT systems onboard. Home, Family Office, The IOT (Internet of Things), Wifi and network-enabled devices, including physical access controls and camera systems, are all observed and assessed to provide a summary of threats.

## PREPARE

An integrated fabric of technical security controls to provide optimum Cyber Security threat protection.

We provide crisis management plans, breach scenario planning and rehearsed response protocols, training and awareness for crew and land-based staff and phishing and attack simulation tests.

## MONITOR

24/7 security monitoring and threat analytics, monitoring specifically designed to look for threats to ships and yachts, bespoke intrusion alerts, deception and decoy technology, marine focused surveillance with immediate alert of suspicious activity. Threat intelligence including Internet and dark web monitoring of clients, names, routes and targets, geolocation monitoring for social and web posts.

## RESPOND

Expert cyber incident response and decision making in a crisis is available within 1 hour 24/7. First responders provide cyber forensics and crisis management along with technical response and remediation decisions. Including containment and identification of root cause for all alerts.

## GLOBAL LIFESTYLE

Advanced Protection and monitoring packages for both assets, family and crew including: guaranteed ransomware protection, secure operational and recreational communications, reputation and information protection and secured email, internet and all connected devices.

Our dependence on electronic communication and internet connectivity means that there are more avenues of attack for criminals who are actively targeting our personal and financial data, safety and reputation.

Infosec Partners provide expertise and managed services to some of the world's largest and most sensitive businesses, high-profile individuals and families.
