

MAPPING LAYER 2 ENVIRONMENTS

RedSeal’s network modeling and risk scoring platform gives you network situational awareness so you can quickly contain threats and prevent downstream infections. Our Layer 2 functionality creates a map of your Layer 2 environment, including the switch port each device connects to. RedSeal combines this with your network’s Layer 3 information, along with your vulnerability scan information, to give you a complete picture of any endpoint on the network.

GAIN SITUATIONAL AWARENESS WITH A LAYER 2 MAP

- See MAC addresses, IP addresses and vulnerability scan data
- Detect un-scanned IP addresses and see gaps in scan coverage
- Ensure up-to-date information by refreshing any portion of the map

RESPOND TO COMPROMISED ENDPOINTS

- Know exactly where your suspicious hosts are located
- Easily identify containment options
- Quickly contain compromised hosts
